

National Workshop on TS4D in Cambodia

The WTO Secretariat conducted a national workshop in Cambodia under the Trade in Services for Development (TS4D) initiative from 10 to 12 June 2026. The workshop was attended by 66 participants from a broad range of ministries with responsibilities relating to services trade.

In addition to providing training on the GATS and schedules of commitments, the workshop permitted to review key trends in global services trade and their development implications. Participants were introduced to the WTO's Integrated Trade Intelligence Portal (I-TIP) Services database, including the Services Trade Policy Database and the Services Restrictions Index, through hands-on training using a dedicated version of the database containing preliminary regulatory information on Cambodia.

Through interactive exercises, the workshop also provided an opportunity for participants to familiarize themselves with the WTO-World Bank Services Trade Competitiveness Diagnostic Dashboard, a data-driven tool to facilitate the assessment of services trade performance and help identify strengths, gaps and possible priority areas for further consideration. A preliminary report derived from the dashboard was presented and shared with authorities.
